EDUCATION

Western University <i>Bachelor's of Engineering Science, Software Engineering</i> Western Engineering Co-op/Internship Program	London, ON Sept 2020 - Apr 2024
--	------------------------------------

WORK EXPERIENCE

hyperPad (Client: Financial Services Platform) <i>Software Engineer</i> <i>Full-stack engineer on enterprise financial platform serving 100,000+ investment professionals</i> - Developed comprehensive multi-language form system supporting 7 languages (English, French, Spanish, Portuguese, German, Italian, Japanese), enabling international platform expansion and eliminating manual translation workflows for platform administrators - Built investment account visibility features and modernized legacy form components for regulated financial platform, directly impacting daily workflows of thousands of financial advisors - Architected schema management system with custom Domain-Specific Language (DSL) for automated translations, reducing configuration overhead by 60% and accelerating feature deployment timelines - Designed and implemented comprehensive testing infrastructure using Cucumber, RSpec, and Jest, ensuring 95%+ test coverage and robust functionality in compliance-critical financial environment - Collaborated with cross-functional teams to deliver features in an Agile environment, participating in code reviews and maintaining high code quality standards Tech: Ruby on Rails 7, React, TypeScript, PostgreSQL, Redis, AWS, Docker, Material-UI, Redux, GitLab, Okta	London, ON Jan 2025 - Current
hyperPad <i>Software Developer Internship</i> - Led the Ruby on Rails 6 to 7 migration for a production backend used by a major client, achieving zero downtime and improved performance - Developed features for a React Native sports recommendation app, implementing AI-driven content suggestions and user engagement components - Contributed to full-stack development across multiple client projects, building scalable backend logic and modern mobile features Tech: Ruby on Rails 6/7, React Native, Node.js, TypeScript, AWS, Docker	London, ON Sept 2024 - Dec 2024
HiCoder <i>Software Engineer Internship</i> - Designed and shipped RESTful APIs facilitating efficient communication between server and client applications - Diagnosed and resolved performance bottlenecks in Node.js applications, improving application response times by 40% and enhancing overall user experience Tech: Node.js, Express, React, JavaScript, HTML, CSS, Material-UI	Canada (Remote) Jun 2024 - Sept 2024

ENGINEERING PROJECTS

Auto Standup Bot - Atlassian Marketplace App - marketplace.atlassian.com/apps/542311656 - Published an Atlassian Forge app that generates AI-powered daily standups from Jira and GitHub activity, delivering formatted updates to Slack or Microsoft Teams on schedule or on demand - Integrated Slack OAuth 2.0 with automatic channel discovery and engineered a noise suppression system that filters Jira changelogs by user activity signals, eliminating irrelevant ticket updates Tech: TypeScript, React, Atlassian Forge, Atlaskit, OpenAI API, Slack OAuth 2.0, GitHub API
Postmark - Unified Email Client - https://github.com/piran777/Postmark- - Developed a unified email client aggregating multiple Gmail and Outlook accounts into a single inbox, featuring OAuth 2.0 account linking, on-demand email sync, and thread-level conversation views - Implemented multi-provider email synchronization using Google Gmail API and Microsoft Graph API with automatic token refresh, delta sync via Gmail History API, and robust error recovery - Built a Gmail-inspired UI with keyboard navigation, real-time search, filter popovers, collapsible conversation threads, and dark/light mode theming Tech: Next.js, TypeScript, React, Prisma, PostgreSQL, Tailwind CSS, NextAuth.js, Google APIs
Intelligent Traffic Management System - https://github.com/piran777/Capstone - Trained a random forest classifier to forecast intersection congestion and optimize route planning, integrated with Google Maps API for real-time visualization - Authored a Python heatmap algorithm identifying high-traffic zones across London, Ontario Tech: Python, Pandas, Streamlit, Git

TECHNOLOGY

Languages: JavaScript, TypeScript, Python, Ruby, Java, C#, C/C++
Frontend: React.js, React Native, HTML/CSS, Material-UI, SCSS, Next.js, Tailwind CSS
Backend: Node.js/Express, Ruby on Rails 6/7, Spring Boot, RESTful APIs, Prisma, NextAuth.js
Databases: MySQL, MongoDB, Redis, PostgreSQL
DevOps & Cloud: Docker, Kubernetes, AWS, GCP, GitLab, Vercel
Tools & Testing: Git, Cucumber, RSpec, Jest, Jira/Confluence, Okta, Forge
Libraries: OpenAI API, Pandas, i18n, Redux, Google APIs, Microsoft Graph API
